

3. ARP-contract

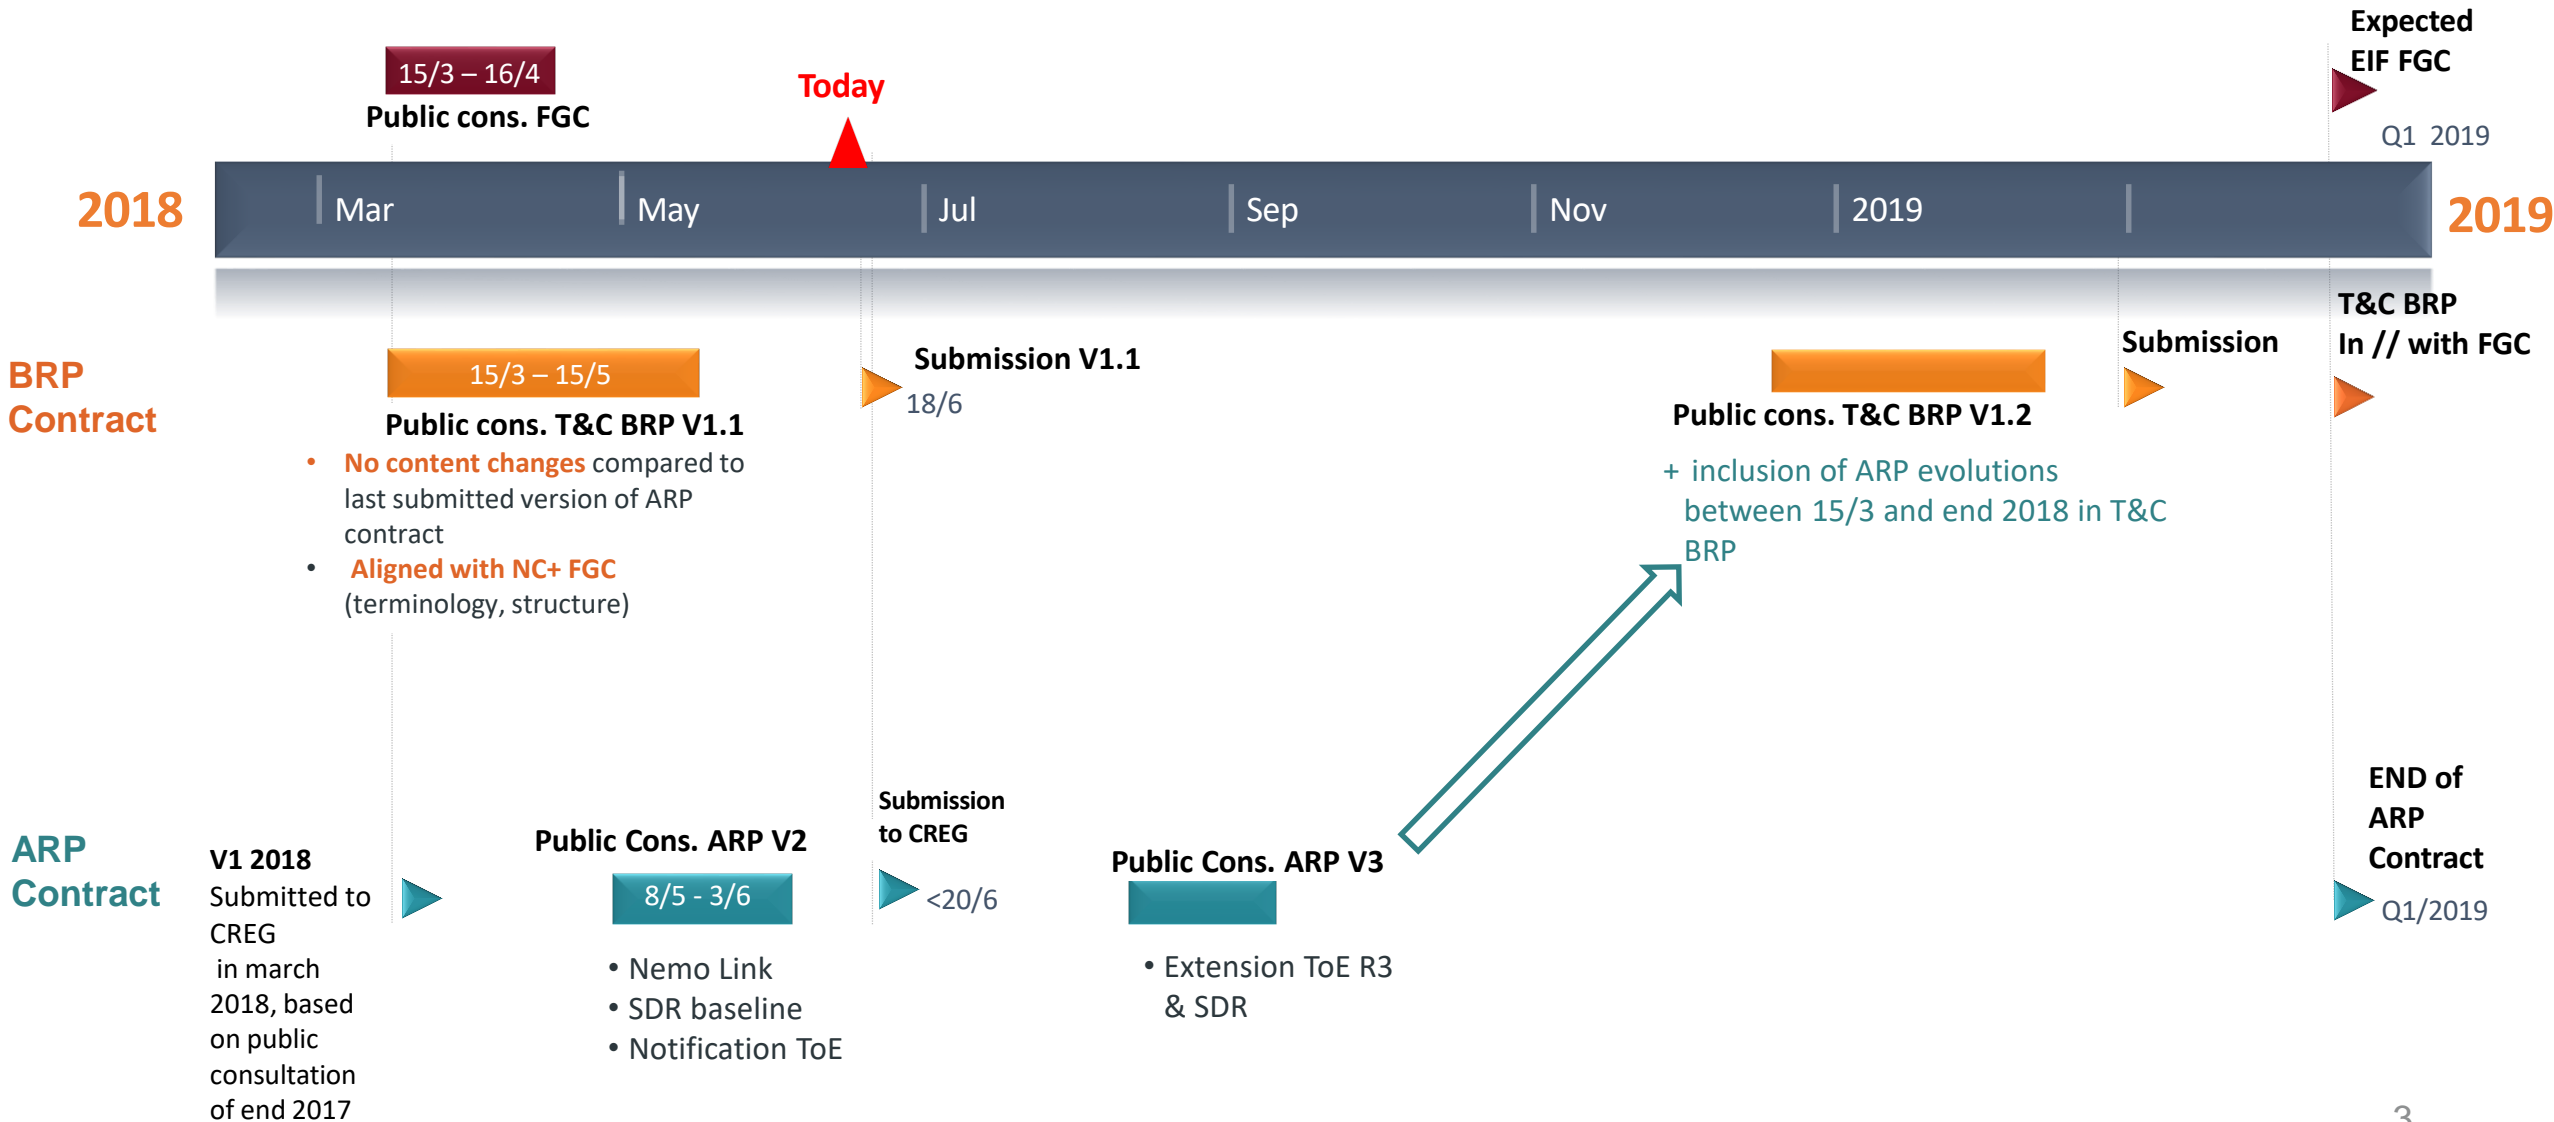

4. T&Cs BRP and BSP

WG Belgian Grid
14 June 2018

ARP-contract versus TC BRP

From ARP Contract towards BRP Contract

T&Cs BRP and BSP: Public consultation

3 reactions received, all non confidential FEBEG, Febeliec & BASF

Main trends from received reactions:

I. Comments linked to the form of the BRP Contract

- **Coherency between BRP Contract and Federal Grid Code (all)**

Parties ask Elia to take into account adaptations made in the FGC proposal after the public consultation on that document and to align the proposal of BRP Contract (especially for the definitions) to the last proposal of FGC.

Elia confirms that the BRP Contract proposed for the alignment of the BRP Contract to the FGC (besides the EU NC) was always in the scope. → Contrat BRP and answers to specific comments in Contract BRP are aligned with the last version of Federal Grid Code Elia submitted on 17/5/2018

In particular following definitions are aligned/added in the BRP Contract:

- *Acces point, injection point, Offtake Point*
- *CDS, CDS-user, CDS-operator...*
- *GridUser, CDS-user, public distribution grid user...*
- *Defense plan, Restoration plan*

- **Links with ongoing evolutions of ARP Contract (BASF)**

BASF supposes that the stakeholders will again be consulted on the consolidated version of the BRP Contract

As stated in previous slid, all evolutions of current ARP contract during the period of consultation/submission of BRP Contract will be included in an updates version of that BRP Contract which will be again consulted and submitted to regulator.

- **Offtake Position in Distribution → Offtake Allocation in Distribution (even if injected energy) (FEBEG)**

II. Comments linked to the Content

- **Introduction of notions or *Market-access Point (within a CDS)* and *CDS-Access Point (BASF)***

Conform modifications made in the FGC the following concepts have been introduced:

- *CDS-access point* (point fixed by CDSO where access to the CDS is given)
- *Market-access point* (virtual point for which a BRP is appointed by the CDS-user for the following a part or the totality of its installations)

Nevertheless Elia won't follow all track changes proposed by BASF related to those concepts

- Allocation for a CDS and not Allocation for a market-access point in a CDS
 - ⇒ *Allocation in a CDS = energy for a qh attributed to the perimeter of BRP by the CDSO for all market-access points for which BRP is responsible in this CDS*
- Nomination by BRP active in a CDS: BRP nominates indeed for all market-access points for which he is responsible in the CDS but he doesn't nominate per market-access point

- **Comments linked to content consulted in framework of other public consultations of ARP contract (ex: TOE, reactive balancing)**

Febeliec regrets the distinction between BRP_{source} and BRP_{fsp} with respect to the possibility to deviate in real-time from their balanced position.

Elia refers to the discussions/responses made during public consultation of Bidladder design ("overdelivery put on ARP_{source}") and of ARP contract (end 2017).

Febeliec believes and hopes ToE will be made available for an increasing number of products with an ambitious program. Elia refers to the schedule described in ToE rules and in the previous slide.

Feedback Terms & Conditions BSP

Reactions received: 3 = FEBEG, FEBELIEC and 1 confidential

1. Alignment of definitions

- Use references to existing definitions in FGC, EBGL, SOGL ...
- Elia aligned definitions as requested

2. Scope of T&Cs in new contracts

- Following the integration in one contract of various services (described in T&Cs), clarification requested that T&Cs will be applied independently (remunerations, cap, etc).
- Elia confirms that they will apply independently

3. Validity of contract

- Various questions linked to the validity of Contract set to 31/12/2021. Why not unlimited?
- These Contracts are also subject to Public Procurement law, according to this they must be at maximum 3 years duration (next supplier qualification period is 2019-2021)

4. Design remarks

- Various remarks related to the design of the products
- They are out of scope and Elia invites actors to bring these remarks in the corresponding frame (WG Balancing, R2 Non-CIPU workshops, etc.)
