

The Quevaucamps-Harchies high-voltage line: Invitation to an information session

Brussels, 19 September 2019

Dear Madam, Sir,
local resident,

On 19 March, Elia, your high-voltage electricity transmission system operator, organised a public information meeting to inform you about the planned reconstruction of the overhead line between Quevaucamps substation and Harchies, along a new, improved route.

At the meeting, Elia and the municipality of Bernissart officially collected everyone's comments and suggestions for the environmental impact assessment (EIA) carried out by CSD Ingénieurs, the independent, approved engineering consultancy.

Elia and CSD are now organising an information session to present the conclusions of that study.

The session will be held on
Thursday, 3 October from 6-8 p.m. at
the Maison Rurale in Blaton
(address: rue Emile Carlier 15, 7321
Blaton).

They will aim to provide you with the fullest possible information on the project and contents of the environmental impact study, as well as giving us an opportunity to answer your questions.

We look forward to seeing you there!

Best regards,

Christian Kerremans,
Community Relations Officer

Elia's Quevaucamps-Harchies project entails rebuilding a section of the overhead power line between the Quevaucamps substation and Harchies along a new, improved route. This new section, which is the same size as the current section, will run through the towns of Bernissart and Beloeil. The Quevaucamps-Harchies project will enable Elia to guarantee grid reliability and integrate regionally generated renewable energy. Once the new line has been commissioned, the current one can be dismantled.
