

## Restore

- Why is the scope of this document limited as proposed? No justification is given, it is not obvious why a delivery point outside the proposed scope would not work. We do not see the need nor benefit of this exclusion.
- We do not agree with the phasing. Seen the current context we see no added value in introducing ToE for SR in 2018 and would ask Elia to look into the ID market instead, where we see clear value.
- The CREG describe 3 cases: opt out, full fallback and bi-lateral contract with volumes from Elia. The last option makes a lot of sense and should be supported by Elia. In this case the volumes should be send as proposed but also the perimeter of the ARPs adapted.
